

Description

Technalign is hiring PHP/MySQL, C, C+ and Linux Developers. We're looking for people with backgrounds in PHP and MySQL and/or C / C++ development to help build web applications for HIATLANTIS, our CRM/ERP/Supply Chain Management solution, Pioneer Linux our Linux operating system, Electricity a cross-platform compatibility utility for Linux and OS/X, and Lin-Books, our Quicken replacement for personal financial applications. Other areas of expertise will be Phyton or other scripting languages.

Developers at Technalign have the ability to excel in an environment that promotes creativity and the ability to have an impact in the computing environment globally. A developer at Technalign can work on operating systems from the kernel up, embedded Linux devices, thin-client technologies, accounting applications, cross-platform technologies, and applications that enhance the end-users experience in the Linux operating system.

Since our founding in March 2002, Technalign has grown rapidly and is now considered one of the top commercial and community editions of Linux.

The responsibilities of this role include:

- Develop and expand new and existing applications for use in HIATLANTIS and Pioneer Linux.
- Create design specifications to ensure that software fits into our overall architecture, addresses requirements, and is testable.
- Work with embedded Linux for cellphones, routers, firewalls, and other devices
- Work with Linux, Windows, and OS/X to develop cross-platform independence for our end-user and Mac users
- Thin-client technologies
- Work with super smart and creative people in cross-functional teams to understand and implement requirements.

Requirements

You make everyone around you better. The right candidate is a visionary who can thrive in a fast-paced environment that is rapidly growing. You bring passion, energy, and a proven record of successfully completing projects with aggressive timelines. You must quickly grasp complex system analysis and programming assignments. Most of all, you derive satisfaction from doing what has never been done before and are able to do it with grace and a sense of humor. You will also have (most of) the following (and hopefully many others):

- Expert level skills in C, C++, PHP, MySQL, Linux
- Skills in web and database application development using an object oriented PHP/MySQL framework.
- Strong written and oral communication skills.
- Must possess high level of enthusiasm. Some system administration experience a plus.
- Bash, PERL, or Python scripting a plus.

Skills/Qualifications:

The ideal candidate will have the ability to work effectively in a team environment composed of peers and cross-functional members, be focused and a self-starter and have exceptional communication

skills, both verbal and written. The ideal candidate will also have the ability to learn new technologies and adapt to new challenges quickly is critical. Project work varies considerably in a range of technologies and environments from legacy integration to up-to-the minute software development with the latest tools and technologies. Ability to learn new technologies and adapt to new challenges quickly is critical. Local and International travel may also be required.

Training is available for any individual with Windows experience. We've found that Windows programmers can transition easily from Windows to Linux depending on the individual and eagerness to learn new technologies.

Essential Personality Traits:

- You must be non-religious about any technology, paradigm, design principle, pattern, software, development tools, methodologies etc.
- You must **NOT** require a highly structured or rigid working and reporting environment including detailed written specifications, directions and goals.
- You must be willing to work in the office unless exceptional circumstances cause you to work elsewhere temporarily
- You must be able to speak/write English with complete clarity and fluency including idioms, colloquialisms etc. We don't have time or patience for any miscommunication.
- You must be tolerant of various cultures and personality traits.

Compensation:

- Compensation has a variable range, depending on skill sets and experience. We offer a very competitive wage for a exciting career that can't be beat anywhere with technologies from standard operating systems to bleeding edge technologies.

<http://intranet.technalign.net>

Our employee Intranet website provides you with information about Technalign and the culture. The site covers our belief in what we feel you should have a match with. Everyone at Technalign has the ability to grow and expand. Please note that some areas are locked down for security reasons for employees only.

<http://www.technalign.com>

Our corporate website provides you with an insight to our company and it's direction. Technalign moves in a direction demanded by its Partners, Solution Providers, Software Developers, Hardware Manufacturers, as well as the end-user of Pioneer Linux. Companies can now relax and have an excellent operating system they have been waiting for as well as peace of mind that Pioneer will have the longevity they need.

The Technalign Trailblazer framework provides you with the ability to understand the corporate direction. You'll also find our key partners on the Technalign corporate site.

<http://www.tapioneer.com>

Pioneer Linux is more than a desktop and server. It's not only about the performance of the system, it's also about world-class support from a growing partner network. Rock solid operating systems are only the beginning, with solutions that meet the need of consumers as

well as business with a product lifecycle that can't be matched. See what a Technalign solution brings to you or your organization. Pioneer is the best engineered, most interoperable platform for consumer and SOHO to enterprise computing. Pioneer is fully supported by a partner network that understands your business needs.

<http://www.pioneermustang.com>

Pioneer Mustang is a Web based tool that allows you to install applications easily on Debian based workstations and servers. Mustang provides you with the ability to install drivers, utilities, and applications from the web. Mustang will be available on a CD that provides dial up customers the ability use Mustang and install without a high-speed Internet connection. A framework of technologies; Mustang will also include thin-client technologies that allow a company or individual to have a small device connected locally or remotely and allows a user to not use the typical computer device any longer.

Mustang will soon be expanded to include embedded Linux devices such as routers and firewalls.
